**Abstract of JP7089826**

**PURPOSE:** To obtain a solid oily cosmetic excellent in fitting feeling to skin, water resistance, sweat resistance and sebum resistance. **CONSTITUTION:** A solid oily cosmetic containing an oily component, wax and powder is compounded with 0.5-30wt.%, preferably 1-20wt.% of a copolymer of a polyvinyl pyrrolidone of the formula (R1 to R3 are 18-30C normal- or branched-cyclic alkyl or H; at least one of them is the above alkyl) and an alpha-olefin. The copolymer derived from the polyvinyl pyrrolidone having above mentioned alkyl of <=17C has decreased coat-forming capability and can not attain the improving effect of cosmetic durability and that of >=31C induces the elevation of melting point and is not suitable as an oil material of a cosmetic. Further, the content of alpha-olefin and vinylpyrrolidone in the copolymer contained as impurities is <=20wt.%, optionally 10wt.%.
